Introduction

Surprise is an extremely powerful weapon in chess and especially in the opening. A player who is surprised in the opening will often lose heart completely, and fail to put up proper resistance. It needn't even matter if the new idea isn't actually very good: the psychological effect of being caught out and dragged onto unfamiliar territory that the opponent knows well can be quite enough. World championship matches have turned on games featuring new ideas in the opening that analysis quickly showed to be harmless – but when it was too late to help the victim.

This, however, is not a book aimed at world championship candidates (though I hope they might find something of interest here too). This book is intended to help keen amateurs, club, county and tournament players to get the better of their opponents in the opening, and the ideas presented have been selected with that aim in mind.

Rules and Principles

Before we set about trying to surprise our opponents, we should consider just what surprise is and how it is caused. This subject has been discussed in detail by Amatzia Avni in his book *Surprise in Chess*, so I shall only discuss the elements relevant to the opening. Essentially, the opponent will be surprised when we don't play according to the principles that he expects us to, or that he thinks are correct. If he has been brought up on dogmatic principles, then even something like putting a knight on the edge of the board, no matter how appropriate and sensible this may be in the given situation, will probably cause some offence. Anything we can do that seems to violate *their* opening principles will tend to surprise opponents. Of course, we need to be sure that what we are doing does actually work, and is justified by the specifics of the position: if we are playing several moves with one piece, we need to be sure that the square it is aiming for is worth the cost in time. If we give up the bishop pair, then we should think our knights have good footholds from which to exert their influence, etc.

Unpromising lines and drawing lines

One of the most fertile fields for finding surprising ideas is to seek out variations for White that theory has rejected because Black can equalize, or even force a draw. Why do I say this – it seems a contradiction? The reason is that the theoretical status of such a line stems from what happened when Grandmaster X played it against Grandmaster Y. Grandmaster X decided to try a move that looked inter-

esting and promising. Grandmaster Y thought long and hard, perhaps thought he was in trouble, and eventually, after much despair, found a defensive idea. It happens to work, and he survives to draw the game, and subsequent analysis shows that his defence was watertight, and that Grandmaster X's idea is, theoretically speaking, harmless. Other grandmasters get to know of this; the idea is not repeated and perhaps merits only a tiny footnote in the opening theory manuals – perhaps not even that, since people who write openings books are more interested in the promising lines and those where the verdict is not yet clear. Simply cataloguing “this idea leads to no advantage because of ...” is boring.

With a bit of research, especially in these modern times with databases of millions of games available, it is possible to acquaint yourself with everything (and more) that Grandmaster X knew about the line going into his game. Your opponent, unless he has happened to have studied this obscure sub-reference, will be as ignorant as Grandmaster Y was at the time. But will he defend like Grandmaster Y managed to over the board? The answer is surely no, and chances are you will come away with a handsome victory.

It is true that if you are intent on victory, then it seems unnatural to play a sequence of moves in the full knowledge that if the opponent replies in a particular way you will have to agree to a draw. From my experience though, I can testify that the ploy works well. I cannot recall a single time when the feared drawing line was actually played. On the occasions when my opponents *have* known the correct defence, they have generally deviated, either because they fear an improvement, or because they don't want to let their 'cowardly' opponent off with a draw so lightly. As Avni observed in his aforementioned book, when we fail to do what the opponent expects of us (i.e. we allow a drawish possibility when we are expected to play for a win), this surprises the opponent, affecting his judgement.

What is in this book?

Firstly, it is *not* a collection of 101 important recent theoretical novelties in topical opening lines. Interesting though such a book would be to write, it would not be of much use to many readers. Your chances of getting to play a novelty on move 26 of the Marshall Attack are fairly slim unless you are playing a specialist, who will probably already be aware of the novelty and have a reply ready, or have worked out a way to circumvent it. Besides, novelties in hot theoretical lines tend to get refuted in a few months. It is amazing how in one *Informator*, a move receives a '!!' marking. Next edition, it is only a '!?', and in some cases it receives the dreaded '?!' or worse.

Instead, I have sought out lines that the reader can expect to get a chance to play against ordinary opponents. This means at a fairly low move-number, or on a main highway of a popular opening. Many of these ideas are not going to become popular at top level, and so will not occupy a major place in opening theory books. If so, then the ideas will retain their surprise value for many years to come.

Soundness rating and surprise value

Each Surprise has two numbers (from 1 to 5) attached to it: the Soundness Rating and its Surprise Value. These indicate my estimates of how objectively correct the idea is, and to what extent it can be expected to shock your opponents. These numbers should help you to judge whether the idea is likely to be effective at your level of play. If you play at a high level, then the Soundness will be the more important. At lower levels you are unlikely to be punished for playing a slightly dubious line, and the Surprise element is more significant. However, please note that many of the ideas in this book are experimental, and it is up to the reader to judge the risks involved. Here is a key to how the numbers should be interpreted:

Soundness Rating

- 5 Refutation; it should win
- 4 Excellent; better than previous theory
- 3 Fairly sound and reliable
- 2 A bit dubious, but unrefuted
- 1 Health warning attached!

Surprise Value

- 5 An absolute shocker; a thunderbolt
- 4 Bewildering for all but the best prepared opponents
- 3 Should prove quite unnerving for a typical opponent
- 2 A bit surprising, but don't rely on its psychological impact
- 1 No real surprise value

How can I find more surprises?

Well, if this book is successful, then maybe there will be *101 More Chess Opening Surprises...* In any case, there is no reason why you shouldn't find your own opening surprises too. Seeking out forgotten lines that are considered 'theoretically harmless' is one good approach, while I can recommend finding a good source of recent games (for instance the Internet chess magazine TWIC), and quickly playing over some games. Some ideas will grab your attention, and if you analyse them carefully (ideally with other players and a computer), then you will place yourself at a considerable advantage.

This book has been a great deal of fun to write, and I hope that you will have as much fun reading it and trying out the ideas. Just choose your opponents carefully with some of them...!

King's Gambit: Fischer

In the Fischer Defence to the King's Gambit, after 1 e4 e5 2 f4 exf4 3 d3 d6 4 d4 g5 5 h4 g4 6 d3 h6 7 c3 c6 8 ge2 f6 9 g3, Black almost invariably plays 9...f3, when 10 f4 gives White good long-term attacking prospects. However, 9...fxg3!? (1a) seems to have been under-rated. After 10 xg3 xc1 11 xxc1 h5!? (instead 11...h6 12 d3 e3+ 13 ce2 e7 14 d2 xd2+ 15 xd2 d5 16 ce1 e6 17 f4 0-0 18 exd5 xd5 19 xe6 let White regain the pawn with an advantage in Short-Akopian, Madrid 1997) 12 d2 e7 (1b) (rather than wasting time with 12...h6, when White can allow the exchange of queens as he has ominous play in the centre) White has yet to establish anything convincing:

a) 13 e4 e6 14 e5 f3 15 ce4 xc4 16 xd6+ f8 17 g1 e6 ♯ Avchinnikov-Susedenko, corr 1990.

b) 13 e5 dxe5 14 ce4 f4 15 dxe5 15...xd2+! (the greedy and very risky 15...xe5 is the only move considered in the old theory books, e.g. 16 d1 0-0 17 g5+ xg5 18 hxg5 ±) 16 xd2 d7 17 e1 g6 18 c1 dxe5 19 g2 e7 20 c5 f5 21 d3 f6 22 xe5 xe5 23 ef1 g6 24 e4 xh4 25 xh4 g5 26 hh1 f4 27 e2 f3 28 d4 and now 28...d7 seems quite good for Black. Instead 28...h4? 29 xf3+ gxf3 30 xf3 e6 31 hg1+ f6 32 g4+ allowed White to escape with a draw in J.Littlewood-Desmedt, corr. 1995.

King's Gambit: Rosentreter

This old gambit arises after **1 e4 e5 2 f4 exf4 3 ♖f3 g5 4 d4!?** (2a).

Now 4...h6 transposes to the Becker Defence, while 4...d6 reaches the Fischer Defence. The next Surprise will present an interesting reply to 4...g4. Here we shall focus on **4...♗g7**, when White has the entirely new idea **5 ♖c3!?** **d6 6 g3** (2b), which you will not find in the theory books. Then:

a) **6...h6** and now, rather than **7 h4 g4 8 ♗h2 fxg3 9 ♖xg4 h5 (9...♖c6!?) 10 ♖e3 ♗f6**, which looked unconvincing for White in Ramik-Oral, Czech Ch 1993, **7 gxf4 g4 8 ♖g1 ♗h4+ 9 ♖e2 g3 10 ♖f3 ♗g4** is at least OK for White.

b) **6...g4 7 ♖h4 f3** (this is similar to **4 ♗c4 ♗g7 5 0-0 h6 6 d4 d6 7 g3 g4 8 ♖h4 f3**, but here White retains the possibility of castling queenside) **8 ♗e3 ♖c6 9 ♗d2** (2c) and now:

b1) **9...♖ge7 10 0-0-0 0-0 11 h3 h5 12 ♗h6** gives White a strong attack.

b2) **9...♗f6 10 ♖f5 ♗xf5 11 exf5** looks awkward for Black.

b3) **9...♖ce7 10 0-0-0 c6 11 ♗d3 ♗a5 12 ♖he1 b5 13 ♖f5 ♗xf5 14 exf5 0-0-0 (not 14...b4 15 ♖e4 ♗xa2? 16 ♖xd6+ followed by 17 ♗xb4) 15 ♗g5 b4 16 ♖e4 ♖d5 17 ♗xd8 ♗xd8 (17...♗xa2 18 c4! bxc3 19 ♖xc3 ♖xc3 20 ♗xc3) 18 ♖b1 a5 19 ♗c4 ♖gf6 20 ♖xf6 ♗xf6 21 ♗xd5 cxd5** and now, in Furhoff-Aleksandrov, Stockholm 1995, White should have played **22 ♗d3 ♗b6 23 ♗e3 ♖d7 24 ♗h6!**, which is very strong indeed.

Rosentreter: 4...g4 5 ♔xf4

We now take a look at 1 e4 e5 2 f4 exf4 3 ♘f3 g5 4 d4!? g4. Old theory focused on the line 5 ♘e5 ♖h4+ 6 g3 fxg3 7 ♖xg4, when 7...g2+?! 8 ♖xh4 gxh1♖ is surprisingly good for White, but the sensible 7...♖xg4 8 ♘xg4 d5 is good for Black. The new idea is 5 ♔xf4!? gx3 6 ♖xf3 (3a). This little-explored Muzio-style sacrifice is quite dangerous, with Michael Adams as one high-rated recent victim. Then:

a) 6...♔g7?! 7 ♖g3.

b) 6...d5 is met by 7 ♘c3, going for rapid development.

c) 6...♘c6 7 ♔c4 ♔g7 (7...d5!?) 8 e5!? ♘xd4 9 ♔xf7+! ♖xf7 10 ♖h5+ ♖f8 (Black could try 10...♖e6!?) 11 0-0, with a strong attack for White – Glazkov and Estrin.

d) 6...d6 7 ♘c3!?! (3b) and then:

d1) 7...♔g7 could be tried.

d2) 7...♔h6 8 ♔c4 ♔xf4 9 ♖xf4 ♖f6 10 ♖e3 ♔e6 11 ♘d5 ♔xd5 12 ♔xd5 ♘c6 13 ♖f1 is awkward for Black, Hresc-Klavcić, Finkenstein 1992.

d4) 7...♘c6 8 ♔c4 ♖h4+ (8...♘xd4! 9 ♔xf7+ ♖xf7 10 ♖h5+ ♖g7 11 0-0-0 gives White fair attacking chances) 9 ♔g3 ♖f6 (9...♖e7 10 0-0) 10 ♖xf6 ♘xf6 11 0-0 (3c) gave Black some problems in Fedorov-Adams, Pula Echt 1997.

Surprise 4 B

Soundness: 3 Surprise Value: 3

King's Gambit: 2...♘c6, 3...f5

Here we discuss a fairly new and aggressive reply to the King's Gambit, which runs **1 e4 e5 2 f4 ♘c6 3 ♘f3 f5!?** (4a). Miles and Wahls have been its main proponents (at least in written debates), while Stefan Bucker has argued White's case. First we should note that White can avoid the issue by playing 3 ♘c3, reaching a Vienna Gambit, but that is not without its problems (e.g. 3...exf4 4 ♘f3 g5 5 d4 g4 6 ♙c4 gxf3 7 0-0 ♘xd4 8 ♙xf4 ♙c5! 9 ♖h1 d6 10 ♙e3 ♙e6! (4b) knocked out one of White's main tries in Mi. Tseitlin-Marciano, Bucharest 1993).

From diagram 4a White has many possible replies:

a) First of all, let's note that the e5-pawn cannot be touched just yet: **4 fxe5?** fxe4 makes White look silly, while **4 ♘xe5??** ♘xe5 5 fxe5 ♖h4+ is worse still.

b) **4 d4?!** fxe4 5 ♘xe5 is a sort of reversed Vienna where the move f2-f4 doesn't help White at all. 5...d6 6 ♘xc6 bxc6 7 ♘c3 ♘f6 gave Black good play in Schaack-Klein, 2nd Bundesliga 1993.

c) **4 d3** is unambitious. After 4...d6 5 ♙e2, Black may keep the symmetry, or break it by, e.g., 5...♙e6 6 0-0 fxe4 7 dxe4 exf4 8 ♙xf4 ♖d7 9 ♙b5 0-0-0, which gave him a reasonable game in Sundqvist-Fahad, Stockholm Rilton Cup 1996.

d) **4 ♙c4** fxe4 (4...exf4 5 d3 ♘f6 6 ♙xf4 fxe4 7 dxe4 ♖e7 8 ♘c3! Bucker) 5 ♘xe5 d5 (5...♘xe5 6 fxe5 ♖e7 is interesting) 6 ♙b5 (4c) and now, rather than **6...♘ge7** 7 0-0 g6 8 d3 exd3 9 ♙e1!?, which gives White the

initiative (Bücker), 6...♖d6!? looks wholly satisfactory.

e) 4 ♖c3 fxe4 5 ♜xe5 ♜f6 (4d) and now White must try something creative if he is not to be simply worse:

e1) 6 ♙c4 d5 7 ♜xd5!? ♜xe5 8 ♜xf6+ ♖xf6 9 fxe5 ♗xe5 10 ♗e2 is messy and unclear.

e2) 6 ♜xe4!? can be answered with 6...♜xe5 7 ♗e2, when White is a shade better, or the more aggressive 6...♜xe4 7 ♗h5+ g6 8 ♜xg6 hxg6.

King's Gambit: Capa's Barry

After **1 e4 e5 2 f4 ♖c5**, one of White's best lines is considered to be **3 ♘f3 d6 4 c3 ♙g4 5 fxe5 dxe5 6 ♖a4+**. Then **6...♗c6** is the preference of some old theory books, but after **7 ♗xe5 ♖h4+ 8 g3 ♙f2+ 9 ♗xf2 ♖f6+ 10 ♗g2 ♖xe5 11 ♙a6!** Black must go into retreat, while **6...♙d7** is the normal move, and allows White a pleasant advantage after **7 ♖c2**. Capablanca once played instead **6...♗d7** (5a). I don't believe it to be sound, but it is interesting. I would quite understand if you chose to trust Capa's judgement rather than mine, but note the 'health warning'! After **7 ♗xe5 ♗f6 (7...♖h4+ 8 g3 ♙f2+ 9 ♗xf2 ♖f6+ is good for White)** there is:

a) **8 ♗xg4 ♗xg4 9 d4 ♖f6 (9...♖h4+ 10 g3 ♖f6 11 ♙f4; 9...0-0 – see line 'b2') 10 ♖c2 (10 dxc5 ♖f2+ 11 ♗d1 0-0-0 wins) 10...0-0-0 (5b) 11 ♖e2 (11 dxc5? ♗xc5 12 ♙b5 ♗xe4 13 ♖f1 ♖h4+ 14 g3 ♗xg3 wins for Black) 11...♗de5 12 ♙e3 ♗xe3 13 ♖xe3 ♗g4 14 ♖e2 (14 ♖g3 ♖g5 15 ♗d2 ♙d6 is quite good for Black) and Black doesn't seem to have enough for the pawn: 14...♖f4 (or 14...♖g5 15 ♗d2) 15 ♗d2 ♗e3 (15...♗xh2 16 0-0-0) 16 g3 ♖h6 17 ♗c4.**

Philidor with an early ...♘b6

After 1 e4 e5 2 ♖f3 d6 3 d4 ♘d7, 4 ♙c4 is a very annoying move for Black. The threats against f7 restrict his options considerably – if Black wishes to maintain the pawn on e5, then he must manoeuvre carefully and passively. Here we consider two attempts by Black to play ambitiously, opening the position.

a) 4...♘b6 (6a) is Jeremy Sharp's idea:

a1) 5 ♙b3 exd4 6 ♚xd4 (6 ♘xd4? c5 wins a piece – the 'point'; 6 c3 dxc3 7 ♗xc3 ♙e7 doesn't give White enough for the pawn; 6 ♗g5 should be met by 6...♘h6) 6...c5 7 ♚d3 ♙e7 followed by ...♙e6 looks playable for Black.

a2) 5 ♙e2 claims that the knight is misplaced on b6. Black can then venture 5...f5!? 6 dxe5 (6 exf5 e4 7 ♗g5 ♙xf5) 6...fxe4 7 ♗g5 ♙e7 (6b), when 8 ♙h5+? g6 9 ♗xh7 is no good after 9...♙f5 or 9...♗f7, but 8 ♗xe4 dxe5 is fairly pleasant for White.

b) At Oakham 1990 Gary Quillan experimented with 4...exd4 5 ♘xd4 (5 ♚xd4 is logical, now the queen cannot be harassed by ...♗c6) 5...♗g6 (6c) and now:

b1) 6 ♗c3 ♘b6 7 ♙e2 ♙e7 8 0-0 0-0 9 ♙f4 a6 10 ♚e1 c5 11 ♗f3 d5 12 exd5 ♘bxd5 13 ♘xd5 ♘xd5 14 ♙e5 ♙e6 led to a draw in his game against Kumaran.

b2) 6 0-0 ♘b6 7 ♙d3 c5 8 ♘b5 ♙e6 9 b3 (9 ♙g5 looks better) 9...a6 10 ♗5a3 d5 11 e5 and now 11...♗g4 looks OK. Instead, in Fishbein-Quillan, after 11...♗fd7 12 f4 f5 13 c4 ♙e7 White could have won a pawn by 14 cxd5 ♘xd5 15 ♙xf5.

Danish Gambit

Unsoundness is one thing that might put players off an interesting gambit, but a dull equalizing line is the one thing guaranteed to destroy a speculative line's popularity. In the Danish Gambit, **1 e4 e5 2 d4 exd4 3 c3 dxc3 4 ♗c4**, Schlechter's **4...cxb2 5 ♗xb2 d5 6 ♗xd5 (7a) 6...♟f6 7 ♗xf7+ ♔xf7 8 ♖xd8 ♗b4+** is fairly barren. Here are a few ideas from diagram 7a:

a) **6...♗b4+ 7 ♔f1 ♟f6 8 ♖b3 (8 ♖a4+ ♟c6 9 ♗xc6+ bxc6 10 ♖xb4?? ♖d1+ mates) 8...♖e7 9 ♟f3 ♟c6 10 a3 ♗c5 11 ♟bd2 0-0 12 ♖c1** is promising for White, Marshall-Motkovsky, Los Angeles 1903.

b) **6...♟f6 7 ♟c3!?** (7b) (note that this is the same as **5...♟f6 6 ♟c3 d5 7 ♗xd5**):

b1) **7...♟xd5 8 ♟xd5** (threatening **9 ♟f6+**) **8...♟c6 9 ♟f3 ♗g4 10 h3 ♗h5 11 0-0 ♖d7 12 ♖b1 0-0-0 13 ♖b3** with a menacing initiative.

Hamppe-Allgaier Gambit

This rather scary-sounding name refers to the following rather scary line of the Vienna Gambit: **1 e4 e5 2 ♘c3 ♘c6 3 f4 exf4 4 ♗f3 g5 5 h4 g4 6 ♗g5 h6 7 ♗xf7 ♗xf7 8 d4**. The main line is then **8...d5 (10a)**, offering a pawn to gain some time, as introduced by the young Capablanca in his match against Corzo. White should continue **9 ♗xf4**:

a) **9...dxe4 10 ♗c4+ ♗g7 11 d5 ♗f6 12 ♖f1 (10b)** 12...♗e5 (12...♗b4 13 dxc6 ♗xc3+ 14 bxc3 ♗xc3+ 15 ♗d2 ♗xa1+ 16 ♗e2 and 12...♗a5 13 ♗xe4 are good for White) 13 ♗xe4 ♗xh4+ 14 ♗g3 ♗h5 15 d6 cxd6 (15...♗xd6 16 ♗d4 wins for White) 16 ♗d5 ♗f3+ 17 gxh3 ♗xd5 18 ♗xd5 offers White an edge.

Berlin with 4...♟e7 and ...d6

The Berlin Defence to the Spanish, 1 e4 e5 2 ♟f3 ♟c6 3 ♟b5 ♟f6 deserves to be a bit more popular. A big practical plus-point is that White is denied the possibility of playing the Exchange Variation (3...a6 4 ♟xc6).

The cautious 4 d3 can be answered by Motwani's idea 4...♟e7! (15a), intending ...♟g6, ...c6, and ...d5. 5 ♟xe5? due to 5...c6, winning a piece after 6 ♟c4 ♖a5+ or 6 ♟c4 ♟g6 7 ♟a4 b5. Note that this idea doesn't work in the analogous line 3...a6 4 ♟a4 ♟f6 5 d3.

The main line is 4 0-0, when I propose Black investigate 4...♟e7 (15b). This move looks passive and insignificant, which just adds to the surprise value when Black follows it up aggressively. Now 5 ♟c3 d6 6 ♟xc6+ bxc6 7 d4 exd4 doesn't give White much after either 8 ♖xd4 0-0 9 ♜e1 ♟g4 10 ♖d3 ♟xf3 11 ♖xf3 ♟d7 12 b3 ♟f6 or 8 ♟xd4 ♟d7 9 ♖f3 0-0 10 h3 ♜b8 11 b3 ♜e8 12 ♟b2 ♟f8 13 ♜fe1 c5 14 ♟f5 g6 15 ♟e3 ♟g7 = Short-Portisch, Skellefteå 1989, so the normal move is 5 ♜e1, when I suggest 5...d6 (15c), which Short has played with success:

Here we have one of the most horrifying ideas in the book: **1 e4 e5 2 ♖f3 ♘c6 3 ♗b5 a5 (16a)**. However, the low soundness rating is due only to a feeling that it can't really be good – no one has demonstrated any clear refutation, tactical or otherwise.

1 e4 c5 2 ♘f3 e6 3 d4 cxd4 4 ♘xd4 ♘f6 5 ♘c3 ♜b6 6 ♘b3 offers Black a transposition, via 6...♘c6, to a position normally reached via the move-order 2...♘c6 3 d4 cxd4 4 ♘xd4 ♜b6 5 ♘b3 ♘f6 6 ♘c3, but with our move-order Black has avoided some annoying alternatives that White has along the way. Then after 7 ♘d3 Black can try:

a) 7...♘xc3+ 8 bxc3 d6 9 0-0 ♘bd7 10 ♖h1 ♜c7 11 ♘a3 0-0 12 f4 (18b) seemed to give White attacking chances in Istratescu-Badea, Bucharest 1996 but now Badea analysed:

a1) 12...e5!? 13 fxe5! (13 ♜d2 ♞e8 with the point that after 14 fxe5 dxe5 White's minor pieces are poorly placed) 13...♘xe5 14 ♘d4 ♘d7 and then 15 ♜e1 ♞fe8 (intending ...d5) 16 ♜g3? ♜xc3, or 15 ♜d2 ♞fe8 16 ♞ae1.

a2) 12...♞e8!? (intending ...b6 followed by ...♘b7), when White should go in for 13 ♘d4 a6 14 ♜d2 b6, though Black's game is not at all bad, since 13 e5?! dxe5 14 ♘d6 ♜xc3 15 ♞f3 e4 16 ♘xe4 can be met by 16...♜c4, while 16...♘xe4 17 ♞xc3 ♘f2+ 18 ♖g1 ♘xd1 is good too.

Our position of interest here arises after 1 e4 c5 2 ♘f3 d6 3 d4 cxd4 4 ♘xd4 ♘f6 5 ♘c3 g6 6 ♙e3 ♙g7 7 f3 0-0 8 ♙d2 ♘c6 9 ♙c4 ♙d7 10 0-0-0 ♙c7 (instead of 10...♙a5). I believe the following analysis casts grave doubt on the viability of 10...♙c7. Essentially, Black needs to be able to avoid the exchange of dark-squared bishops and to get in ...♘c4 for this line to work, but there are tactical problems.

White plays 11 ♙b3 (19a) 11...♙fc8 (11...♘a5 12 ♙h6 ♘c4 and the equivalent 11...♘e5 12 ♙h6 ♘c4 are discussed in the next Surprise) 12 h4! ♘e5 13 ♙h6 (13 h5 ♘c4 is less critical) 13...♙h8 (for what happens if Black does not move his bishop, compare the next Surprise) 14 h5 ♘c4 15 hxg6! (19b) is not just a move played to be flashy – White cannot be forced to take the c4-knight at all, and this frustrates both Black's counterattacking and defensive ideas:

a) 15...♘xd2?? 16 gxh7#.
 b) 15...hxg6? 16 ♙xc4 ♙xc4 17 ♙f8! ♙xf8 18 ♙xh8+! ♙xh8 19 ♙h6+ ♙g8 20 ♘d5.

c) 15...fxg6 (forced) and now, rather than the cooperative line 16 ♙xc4+ ♙xc4 17 ♙g5 ♙f7 (the queen can defend and counterattack) given in some old books, 16 ♙g5! (19c) gives White a strong attacking position. Ideas include ♘f5, ♘d5 and threats to the pinned knight on c4. 16 ♙g5! is also possible.

Milner-Barry's Other Gambit

Aside from his well-known gambit in the French Defence, Sir Stuart Milner-Barry devised another interesting sacrificial continuation, which may turn out to be of more enduring value. It occurs after **1 e4 c5 2 c3 d5 3 exd5 ♖xd5 4 d4 cxd4 5 cxd4 ♖c6 6 ♜f3 e5 7 ♖c3 ♗b4** (one of the lines recommended for Black against the c3 Sicilian by Joe Gallagher in his popular book *Beating the Anti-Sicilians*). Sir Stuart's idea was, rather than the old move **8 ♗d2**, to play **8 ♗e2!?** (26a), planning to sacrifice a piece if Black plays the natural **8...e4**, and this is discussed in the next Surprise. Otherwise White seeks to benefit from the fact that ♗e2 and 0-0 is a more constructive way to break the pin than the clumsy ♗d2. The other variations are as follows:

a) **8...exd4 9 0-0** sees Black resorting to quiet means to sue for peace:

a1) **9...♗xc3?! 10 bxc3 ♖ge7 11 ♖xd4** (26b) is uncomfortable for Black: **11...♖a5** (11...0-0 **12 ♖xc6 ♖xc6 13 ♗a3 ♖e8 14 ♗f3** puts Black under great pressure, Ponomariov-Savić, Zagan jr Wch 1997) **12 ♖xc6 ♖xc6 13 ♖d6 ♖e5 14 ♖xe5+ ♖xe5 15 f4 ±** Liss-Sutovsky, Rishon le Zion 1995.

c3 Sicilian: unrefuted line

The position after 1 e4 c5 2 c3 d5 3 exd5 ♖xd5 4 d4 cxd4 5 cxd4 ♜c6 6 ♘f3 ♙g4 7 ♜c3 ♙xf3 8 gxf3 ♖xd4 9 ♖xd4 ♜xd4 10 ♜b5 (28a) has for many years been regarded as a disaster for Black. Indeed, White has scored very heavily from this position in practice, but it should be noted that in many of these games Black reached diagram 28a purely by accident – the moves leading to it are very natural. Here we consider three main attempts by Black to hold his position together.

A few comments on move-order:

1) White can avoid the issue by playing 7 ♙e2, leading to a normal line, but this rules out certain options that White has in the standard variations where Black does not play an early ...cxd4. Besides, most players will be delighted to play 7 ♜c3.

2) The position could be reached via a Morra Gambit move-order, in which Black will have already played ...cxd4.

3) If diagram 28a is playable for Black, then in the Panov Attack (1 e4 c6 2 d4 d5 3 exd5 cxd5 4 c4), he could try 4...♜c6, since then 5 cxd5 ♖xd5 transposes to our line of the Sicilian.

Black's defensive tries all start with 10...♜c2+ 11 ♖d1:

a) 11...♜c8 12 ♜xa7 ♜c5 13 b4 (13 ♙e3 ♜xe3+ 14 fxe3 is level) 13...♜xb4 14 ♙b5+ ♜d8! 15 ♙e3 e6! (28b) 16 ♙a4 (16 ♙xc5 ♙xc5 wins the a7-knight) 16...♜f6! 17 ♙xc5 ♙xc5 (Black has at least enough compensation) 18 ♜b5 ♙e7 19 ♙e2 ♜fd5 20

White's best reply to the Accelerated Dragon, 1 e4 c5 2 ♖f3 ♗c6 3 d4 cxd4 4 ♗xd4 g6, is undoubtedly the Maroczy Bind, 5 c4. However, for those who find that too boring, 5 ♗c3 ♗g7 6 ♗e3 ♗f6 7 ♗c4 can be recommended. Then if Black wishes to avoid transposition to a Yugoslav Attack, his main options are 7...♗a5 and Uogele's 7...0-0 8 ♗b3 a5 (8...♗g4 9 ♗xg4 ♗xd4 should here be answered by 10 ♗d1 ♗xb3 11 axb3 b6 12 ♗d4, giving Black a miserable game), when 9 a4 (32a) (9 f3 d5! works well for Black) has been giving Black some problems, as 9...♗g4 (9...d5 is less effective without White's dark squares weakened and with ...a4 ruled out) 10 ♗xg4 ♗xd4 11 ♖h4 (32b) gives White excellent attacking prospects: 11...♗xb3 (11...d6 12 ♗d5 e6 13 ♗e7+! ♖h8 14 0-0-0; 11...e6 12 ♗g5) 12 cxb3 ♗a6 (12...♗f6 13 ♗g3 d6 14 ♗d5! and the invasion on b6 and possibly a rook coming to c7 cause problems; 12...d6?! 13 ♗d5) 13 0-0 ♗e6 (13...d6 14 ♗d5) 14 ♗fe1 is the most accurate way for White to arrange his rooks:

Caro-Kann: Gunderam

I have decided to cite a convincing variation against the Gunderam line, **1 e4 c6 2 d4 d5 3 exd5 cxd5 4 c4** ♖f6 **5 c5?!**, since, although well-known to many Caro-Kann players, I don't believe the analysis has appeared in print before. Some people persist in playing the Gunderam, perhaps through reading an old copy of *An Opening Repertoire for the Attacking Player*. After the best move **5...e5!** (35a), Gunderam's analysis is based on a large dose of wishful thinking:

a) **6 dxe5** ♗e4 7 b4 a5 (35b) smashes up White's pawns.

b) **6** ♗c3 exd4 7 ♖xd4 ♗c6 8 ♖b5 is Gunderam's analysis. He continued with the absurd **8...♗d7?**, whereupon White exchanged on c6, and Black had problems coordinating his counterplay. However, Black can break the pin in a far more convenient way a move later: **8...♗e7!** 9 ♗ge2 (9 ♗xc6+ bxc6 10 ♗ge2 0-0 is the same) 9...0-0 10 ♗xc6 bxc6 11 0-0 ♗d7 ♠ (35c) and now we see Black has gained much more than a tempo by not playing ...♗d7. His knight can use d7, and the bishop can take up a fine post on a6. One example: 12 b4 ♗f6 13 ♖d2 a5 14 ♗a3 (14 b5 ♗xc5 15 ♗a3 d4 16 ♗xc5 dxc3) 14...♗e5 15 ♠fd1 (15 ♠ad1 ♗a6) 15...♗g4 16 ♖c1 ♠e8 17 f3 ♗xf3+! 18 gxf3 ♗xf3 19 ♖d2 ♖d7 20 ♗g3 ♖h3 0-1 (21 ♖f2 ♠e1+ is reminiscent of a famous line from Byrne-Fischer, USA Ch 1962/3) Hemming-S.Williams, corr. 1994.

1 e4 c6 2 ♘c3 d5 3 ♖f3 dxe4 4 ♘xe4 (38a) is the critical line of the 3 ♖f3 system. The theoretical prescription for Black is to play ...♗d7 followed, after d2-d4, by ...♗df6 (i.e. *not* the normal knight in the main lines of the Caro) since this opens up an attack on the d4-pawn. White's choice then is essentially between safe but dull lines, in which he safeguards the d4-pawn, and more interesting, riskier lines in which he gambits it. We shall focus on the latter.

Caro-Kann 5 ♘f3 and 6 ♘c3

The variation 1 e4 c6 2 d4 d5 3 ♘c3 dxe4 4 ♘xe4 ♘d7 is looking very sound for Black nowadays. Since the modern main lines are making so little impression on it, I suggest dredging 5 ♘f3 ♘gf6 6 ♘c3 (39a) out of the archives. It has been played by Smyslov, Spassky, Bronstein and Tal (the latter two winning brilliancies in the line), so can't be too bad! Here are some variations:

French Exchange with 4 c4

Here we examine an idea for Black in the line 1 e4 e6 2 d4 d5 3 exd5 exd5 4 c4, which had been proving quite annoying for Black. Tal Shaked and Thomas Luther have shown that 4...♞b4+ 5 ♞c3 ♞e7 (43a) gives interesting possibilities. Note that it is important that the knight goes to e7, via where it can bring more immediate pressure to bear on the d4-pawn than it could from f6. Winckelman-Reimer Gambit

Here I present a good reply to this dangerous gambit against the Winawer French: **1 e4 e6 2 d4 d5 3 ♘c3 ♙b4 4 a3 ♙xc3+ 5 bxc3 dxe4 6 f3**. This is a bit like a Blackmar-Diemer Gambit, but more justified by the disappearance of Black's important defensive king's bishop. Now **6...e5** (44a) is Hübner's recommendation.

a) **7 fxе4 ♖h4+** 0-1 De Smet-Hoffmann, corr 1991. One can but hope!

b) **7 ♙c4** can be answered in a number of ways; **7...♘c6** looks sensible.

d) **7 a4** is a logical move, freeing a3 for the bishop. One danger for Black is that his lack of dark-square control will give White attacking chances. However, **7...exd4** (**7...♘f6 8 ♙a3 8 cxd4 c5** (44b) blocks off the diagonal. Accelerated Gurgenidze

This is a tip for those who want to play the Austrian Attack against the Pirc/Modern, while dodging the Accelerated Gurgenidze, which is a little move-order trick devised by Dave Norwood: **1 e4 g6 2 d4 d6 3 c3 c6**. The idea is that Black meets 4 f4 with 4...d5 5 e5, seeming to lose a tempo (...d7-d6-d5, rather than ...f8-g7 and ...d7-d5 as in the normal Gurgenidze), but in fact gaining one, since the bishop is better on f8 than g7 in this structure (thus ...d7-d6-d5 is a tempo faster than ...d7-d5 and ...f8-g7-f8)!

However, we play **4 e3** (45a). Then 4...d5 makes no sense (a move down on a type of Gurgenidze – without f4 – that Black was seeking to avoid), while **4...g7 5 f4** reaches an Austrian Attack, as desired.

This is not an easy type of Austrian Attack for Black. The move ...c6 only really makes sense if a counterattack with ...b6 is viable. However, this does not appear to be the case here. A critical line runs **5...b6 6 Bb1** (45b):

a) **6...f5 7 e5!** dx e5 8 fx e5 e xe5 9 f3 g7 10 e c4 gives White very good compensation for the pawn, C.Hansen-Todorčević, Rome 1988.

b) **6...h6 7 f3 f5** (highly artificial) 8 e5 f7 9 d2 c7 10 e d3 with a definite plus for White, C.Hansen-Lau, Palma de Mallorca 1989.

c) **6...e5 7 f3 g4 8 fx e5 dx e5 9 e c4!** ex d4 (45c) 10 e xf7+! f8 11 e f2 and Black's king is insecure.

After 1 e4 ♘f6 2 ♘c3 d5 3 e5 ♘e4 4 ♘ce2, the move 4...f6 (rather than the standard 4...d4) has been viewed with suspicion for many years in view of the forceful line 5 d3 ♘g5 6 ♗xg5 fxg5 7 h4. Black must reply 7...g4, when 8 ♘f4 (8 d4 c5 9 dxc5 ♘c6 is likely to reach the same position after 10 ♘f4 g6) 8...g6 9 d4 c5!? Alekhine: 3 ♖a3?!!

A considerable psychological benefit can be achieved by playing a move that looks ridiculous, yet is viable. Such an effect can be achieved after 1 e4 ♟f6 2 e5 ♟d5 with the move 3 ♖a3 (50a). This idea was suggested to me by my young clubmate Simon Buckley. While I don't think it's much of a try for advantage, I can't find a way for Black to take advantage of White's strange move, and it is possible to land in trouble by trying too hard to do so. The idea is to play the knight to c4 to give the e5-pawn support without needing to push the d-pawn just yet, and it can journey onward to e3 if kicked.

Some variations:

a) 3...♟c6 will be answered by 4 ♟f3.

b) 3...e6 encourages 4 ♟c4.

c) 3...d6 4 ♟c4 and then:

c1) 4...b5 5 ♟e3 (the attack on b5 saves White's pawn) 5...♟xe3 (5...dxe5 6 ♟xb5+ c6 leaves White structurally better) 6 dxe3 (or 6 fxe3) 6...a6 (50b) is an odd type of position – I think I prefer White.

c2) 4...♟f5?! 5 d4 ♟c6 (5...♟b4?! 6 ♟e3; 5...♟d7) 6 ♟f3 ♟cb4 7 ♖a3 and I don't see where Black is going.

c3) 4...dxe5 5 ♟xe5 ♟d7 (5...♟d6; 5...♟f5?! 6 ♟f3) 6 ♟gf3 ♟xe5 7 ♟xe5 should be compared with the 'mainstream' line 3 d4 d6 4 ♟f3 dxe5 5 ♟xe5 g6 6 ♟d2 ♟g7 7 ♟df3.

1 Nf3 Nf6 2 c4 g6 3 Nc3 Ng7 4 e4 is a move-order used quite often by those as White who are willing to play a Réti, English or King's Indian (after 4...d6), but wish to stop Black playing the Grünfeld. Then 4...e5!? (51a) will come as quite a surprise. This is related to the Adorjan line 1 c4 g6 2 e4 e5 , into which it can transpose. 4...e5 was first played by Marshall in 1941, in one of the very few examples I have found prior to Rowson's use of it in 1997. The critical line runs 5 Nxe5 Nxe4 6 Nxe4 (not 6 Nxf7?? Nxc3) 6... Nxe5 7 d4 Ng7 (51b), which looks quite satisfactory for Black, e.g. 8 Ng5 f6 , and then 9 Nh4 0-0 (Motwani) is quite good for Black, who has several threats against White's uncoordinated pieces; 9 Nf4 0-0 and again Black can be quite happy; or 9 Ne3 0-0 with ideas of pushing the f-pawn.

In fact, no one has played 5 Nxe5 in diagram 51a. In practice, the reply has always been 5 d4 exd4 6 Nxd4 0-0 7 Ne2 Re8 8 f3 c6! (51c), reaching a position that arises more commonly from 1 c4 g6 , and is discussed in Surprise No. 52. It is fully satisfactory for Black.

White's only other way to proceed on move 5 is to go in for a slow Closed English, e.g. 5 g3 0-0 6 Ng2 , but with the knight on f3 rather than e2, his set-up is not very dangerous.

Adorjan English

This is a related idea to the previous Surprise, but one that is a little better known. After **1 c4 g6** (considered by many King's Indian and Grünfeld players the most accurate), White can play **2 e4**, stopping the Grünfeld or Leningrad Dutch, and giving him more leeway against the Modern and King's Indian. Adorjan's idea is **2...e5!?** (52a):

a) **3 f3 g7 4 d4** (otherwise a closed English results) **4...exd4 5 dxd4 f6!** **6 c3** (6 e5 e4!) **6...0-0 7 e2 e8 8 f3 c6!** is a position already seen in diagram 51c. Avoiding the King's Indian

The position after **1 ♘f3 ♘f6 2 g3 g6 3 ♙g2 ♙g7 4 0-0 0-0 5 d4 d6** can be reached via several move-orders. Many players are put off taking on the position as Black because after **6 c4** it seems the game has transposed to a main-line Fianchetto King's Indian. However, the **6...♙f5** (54a) idea we now consider is not available via a King's Indian move-order (with ♘c3 already played), and leads to play of a different type.

a) **7 ♘c3 ♘e4** (7...♖c8 is less good than in 'b', as White could play forcefully in the centre here) **8 ♘d5** (8 ♖b3 ♘xc3 gives Black an easy game) **8...c6 9 ♘e3 ♙d7 10 b3** (10 ♘d2 ♘xd2 forces **11 ♖xd2**, compromising White's development) **10...f5** (a good Leningrad Dutch) **11 ♙b2 f4 12 ♘c2 ♘a6** (54b) **13 e3 fxg3 14 fxg3 ♖a5 15 ♘h4 ♘g5 16 ♖e1 ♘h3+** with the better game for Black, D.Walker-Sadler, British Ch (Hove) 1997.

This line can arise when Black plays ...g6 against the English, viz. **1 c4 g6 2 e4 ♖g7 3 d4 d6 4 ♙e3 ♜f6 5 f3** (57a), from a Modern (1 d4 g6 2 e4 ♙g7 3 c4 d6 4 ♙e3 ♜f6 5 f3), or via 1 d4 ♜f6 2 c4 g6 3 f3 ♙g7 4 e4 d6 5 ♙e3. A transposition of the Sämisch King's Indian will occur if White plays a quick ♜b1-c3 (probably the best reply to ...c5 ideas), but he can also keep the square free for the other knight, so as not to restrict his kingside development. Wahls's Anti-KIA/Réti idea

White resolutely refuses to take Black on in a King's Indian or Grünfeld, and after 5...d6 will angle for a Closed Sicilian with 6 e4 or an English with 6 c4. Wahls's idea is 5...d5 (58a), which has some nice and surprising points, the main one being to meet 6 $\text{d}bd2$ with 6...d4!, and then after 7 e4 to take *en passant*. That position is discussed in the next Surprise. Here we deal with the alternatives:

a) 6 a3 b6 7 b4 $\text{e}b7$ 8 $\text{e}b2$ c5 9 $\text{d}bd2$ $\text{d}bd7$ is rock-solid for Black, e.g. 10 $\text{f}b1$ $\text{c}c7$ 11 bxc5 bxc5 12 $\text{d}e5$ $\text{d}b6$ 13 $\text{e}a1$ $\text{f}ad8$ 14 e3 $\text{d}e8$ 15 f4 $\text{d}d6$ 16 $\text{e}e1$ (Dizdarević-Uhlmann, Sarajevo 1981) 16...f6 \bar{f} Uhlmann.

b) 6 c3 $\text{d}c6$ (6...a5!?) 7 $\text{d}bd2$ (7 b4 a6) 7...e5 is fine for Black, since any attempt by White to play in KIA style with e4 is ineffective with him having wasted time and weakened the a6-f1 diagonal by the move c3.

Wahls's idea: Main line

After 1 ♖f3 ♘f6 2 g3 g6 3 ♙g2 ♙g7 4 0-0 0-0 5 d3 d5 6 ♘bd2 d4!, most players, I imagine, will play 7 e4 and be surprised by the answer 7...dxe3! 8 fxex3 c5 (59a). Indeed, it seems illogical for Black to make three moves with his d-pawn and, apparently, have nothing to show for it. However, it now turns out to be very difficult for White to get his pieces and centre pawns (which have no 'ideal formation' to advance into) working together without leaving weaknesses:

a) 9 ♘c4 ♘c6 10 a4 ♙e6 (59b), planning to make White's pawns really weak by taking on c4, gives Black a good position, as Wahls's analysis shows: 11 b3 ♘d5; 11 ♘a3 ♙d7; 11 ♘ce5 ♘xe5 12 ♘xe5 ♙c7; or 11 ♙e2 ♙xc4 12 dxc4 ♘d7 13 ♙b1 ♙a5 14 b3 ♙ad8 15 ♙d2 ♙c7.

b) 9 ♙e2 ♘c6 10 ♘c4 ♙e6 11 ♘fe5 (for 11 a4 see line 'a') 11...♘xe5 12 ♘xe5 ♙c7 13 ♘c4 (13 ♘f3 is met by 13...c4, when White's pawns will be weakened one way or another) 13...♙ad8 (13...♙xc4!? would not be at all bad for Black either) 14 ♙d2 ♘d5 (59c) 15 e4?! (the centralized knight is annoying, but this move blocks off the g2-bishop; Wahls notes 15 c3?! b5, and suggests 15 a3) 15...♘b4 16 ♙f4 ♙c8 17 a3 ♘c6 18 c3 h6 (planning 19...b5, when 20 ♘e3 would trap the f4-bishop) 19 h4 ♙g4 20 ♙f3 ♙h3 21 ♙fd1 b5 22 ♘d2 ♘e5 23 ♙xe5 ♙xe5 was obviously good for Black in Wittke-Wahls, Berlin 1989.

Reversed Fajarowicz

If you like the type of play Black gets in the Fajarowicz Gambit, then there is a way to get an improved version as White: **1 ♖f3 d5** (or **1...c5 2 b3 d5**) **2 b3 c5 3 e4!?** (60a). In the positions that result, b3 is a very useful move indeed. If you are thinking that Black playing such an early ...c5 is a bit cooperative, consider that 1...c5 will be the choice of many Sicilian players, while 1 ♖f3 d5 2 b3 c5 3 ♗b2 f6 was once used by Fischer to crush Petrosian. On to specifics:

a) **3...d4?! 4 ♗c4.**

b) **3...♗f6** can be met by **4 exd5 ♗xd5 5 ♗b2** or **4 e5 ♗fd7 5 e6!?** fxe6 **6 ♗b2**, a pawn sacrifice to disrupt Black's game.

c) **3...e6** is known via **1 e4 c5 2 ♗f3 e6 3 b3 d5**. One idea is **4 exd5 exd5 5 ♗b2** (60b), e.g. **5...♗f6 6 ♗b5+ ♗c6** (6...♗d7 **7 ♖e2+** and **8 ♗xf6**) **7 ♗e5 ♖d6 8 0-0 ♗e7 9 d4 ±** Novopashin-Kirpichnikov, Rostov 1975.

d) **3...dxe4 4 ♗e5** (60c) with the following sample possibilities:

d1) **4...♖d4? 5 ♗b2 ♖xb2 6 ♗c3** traps the queen (6...♖a3 **7 ♗b5+!**; 6...♗e6 **7 a3**).

Anti-Sokolsky ideas

Here we consider two lines for Black against the Sokolsky Opening, **1 b4**:

a) **1...c6** and then:

a1) **2 ♖b2 ♜b6!** (avoiding the messy gambit **2...a5 3 b5 cxb5 4 e3 b4 5 a3**) **3 a3 a5 4 c4 axb4 5 c5 ♜c7 6 axb4 ♜xa1 7 ♖xa1 (61a)** is a position claimed in some theory books to favour White. However, when it occurred in actual play, Black easily got a very pleasant game by **7...d6 8 ♜a4 e5 9 ♖f3 ♖d7 10 cxd6 ♖xd6 11 g3 ♖gf6**, Teichmann-Watts, British Ch (Southampton) 1986.

a2) **2 c4 d5 3 e3 e5 4 ♖b2 f6 5 a3 ♖e6 6 cxd5 cxd5 7 d4 e4 8 ♖e2 f5 9 ♖f4 ♖f7 10 h4 ♖f6 11 ♖c3 ♖d6 12 ♜b3 ♖bd7** gave Black a solid space advantage in Sjöberg-Rötšagov, Gothenburg 1997.

Soundness: 2 Surprise Value: 4

English: Myers Defence

Here we turn our attention to **1 c4 g5** (62a). No, this is not an attack of Basmania (...g5 and ...h6 against anything), but rather an attempt to profit from a drawback of White's first move: that he can no longer fortify the long diagonal by c2-c3. This means that it is difficult for White to threaten ♟c1xg5 in earnest. Meanwhile the pawn stakes out space on the kingside and is ready to kick a knight from f3 by ...g4. If White replies very quietly, normal-looking positions can be reached, but where Black has gained a tempo for his kingside play by playing ...g7-g5 rather than ...g7-g6-g5.

On the other hand, 1...g5 is a grotesque weakening of Black's kingside, and highly inventive play is needed for Black to stay on the board at all. Such play is frequently seen in the games of the Finnish player, Kari Heinola, who has played 1...g5 many times with great virtuosity. If you wish to try this line, I recommend a careful study of his ideas.

a) **2 h4 gxxh4 3 ♖f3 h3 4 g3 d5 5 ♟xxh3 ♟xxh3 6 ♜xxh3 dxc4 7 ♖a4+ ♗d7** = Tuomainen-Heinola, Finland 1985.

A More Palatable Modern

One of the practical drawbacks to playing the Modern is that after 1 d4 g6 2 e4 ♙g7 3 c4 d6 4 ♜c3 , the natural 4...e5 can be met by 5 dxe5 dxe5 6 ♞xd8+ ♚xd8 7 f4. Although this isn't necessarily too unpleasant for Black, it is deadly dull and kills Black's winning chances. 1 d4 g6 2 e4 d6 3 c4 e5 (64a) (or these moves in some other order) aims for an improved version. Now if White exchanges queens, the black bishop will be able to find a better square than g7: either h6, to exchange off the now 'bad' bishop, or an active post on c5 or b4. Some variations:

a) 4 dxe5 dxe5 5 ♞xd8+ ♚xd8 6 f4 (64b) 6... $\text{♜h6!?$ (6... ♜b4+ 7 ♜c3 ♜f6 is perfectly OK too) 7 g3 ♜f6 8 ♜c3 ♞e8 9 fxe5 ♙xc1 10 ♞xc1 ♜g4 11 ♞d1+ ♙d7 12 e6! fxe6 13 ♙e2 ♜e5 14 ♜f3 ♜bc6 15 ♜b5 ♜xf3+ 16 ♙xf3 ♜e5 17 ♙e2 ♞f8 18 ♞f1 ♞xf1+ 19 ♚xf1 ♙e7! with at least equality, Fedder-D.Cramling, Helsingborg tt 1990.

After 1 d4 d5 2 c4 dxc4 3 ♘f3 ♘f6 4 e3 e6 5 ♙xc4 c5 6 0-0 a6, the pawn sacrifice 7 e4 (71a) is nothing new – it was played in the 1950s and 1960s by Petrosian, Geller and co. After 1 d4 d5 2 c4 dxc4 3 ♘f3 ♘f6 4 e3 e6 5 ♙xc4 c5 6 0-0 a6 7 e4 Black most obvious move is to take the impudent pawn: 7...♘xe4 (72a).

However, the open e-file and White's development advantage then promise Black a difficult ride. White has two interesting and promising ways to continue. The former is less well proven, but leads to some beautiful variations. The critical line seems to depend on a position where White has powerful play for two pawns, as envisaged by Avrukh. The latter generally sees White either winning back the sacrificed pawn at the cost of some simplification, or keeping Black under the cosh in a complex middlegame.

Old Indian 4...♘f5 5 ♘g5!

The idea of playing, after 1 ♖f3 d6 2 d4 ♘f6 3 c4 g6 4 ♘c3, the move 4...♘f5, to cause White some inconvenience if he wishes to play e4, was developed in the 1980s by a group of Americans, notably Joel Benjamin. One of the key ideas is that after 5 ♘h4 ♘d7, White will shortly need to drop his knight back to f3. Then the position will be like a normal King's Indian, except that Black has managed to play the move ...♘d7 (which is probably of some use) entirely for free.

The move played by White in the short game Gausel-Hodgson, Oslo 1994, which follows, is considered by the American analysts to be virtually a refutation of the idea.

5 ♘g5! (73a) 5...♘g7?! (instead after 5...h6 6 e4, 6...hxg5 7 exf5 gxf5 8 ♘xg5 ♘e4 9 ♘xe4 fxe4 10 ♖c2 is good for White, while 6...♘g4 7 ♘f3 is a version of King's Indian where ...♘g4 is not too good, and ...h6 could well be worse than useless) 6 e4 ♘g4 7 f3! ♘c8 (7...♘d7 would here be unfortunate due to 8 e5!) 8 f4 (73b). This is a King's Indian, Four Pawns Attack, except that White's knight is on g5 rather than g1. 8...0-0 (8...h6 9 ♘f3 is a Four Pawns, with Black having spent a tempo on ...h6) 9 ♘e2 e5? KID: Epishin's 10 ♖c2

In mid-1995, in the position after 1 d4 ♟f6 2 c4 g6 3 ♜c3 ♟g7 4 e4 d6 5 ♞f3 0-0 6 ♙e2 e5 7 0-0 ♜c6 8 d5 ♞e7 9 b4 ♜h5 the world (or at least the King's Indian-playing world) was stunned by Ivan Sokolov's novelty 10 ♚e1. At the very end of 1997 came another completely new move in this position: Epishin's 10 ♖c2 (74a). Will this be 'the new ♚e1' and blossom into a full system with its own sophisticated themes?

One motivation may be that after 10 c5 ♞f4 11 ♙xf4 exf4, White would like to play 12 ♖c2, but his position is then a bit too loose, with 12...f5 possible. Instead in that line 12 ♖d2 h6 13 ♚ad1 g5 14 e5 g4 seems satisfactory for Black – with the queen on c2 and the d1-rook opposing the black queen directly, things are a little different. Here are some lines:

a) 10...a5 11 bxa5 11 ♙a3?! axb4 12 ♙xb4 c5 13 dxc6 ♜xc6) and Black has the normal choice: 11...c5 or 11...♚xa5.

b) 10...f5 11 ♞g5 ♞f4 12 ♙f3! (74b), e.g. 12...h6?! 13 ♙xf4 exf4 (13...fxe4 14 ♙xe4) 14 ♞e6 ♙xe6 15 dxe6.

c) 10...♞f4 11 ♙xf4 exf4 12 ♚ad1:

In the Four Pawns Attack, 1 d4 ♟f6 2 c4 g6 3 ♟c3 ♟g7 4 e4 d6 5 f4 0-0 6 ♟f3, Black's most popular line is 6...♞a6. I recommend that White investigate 7 e5, meeting 7...♞d7 with the calm 8 ♟e2, rather than any berserk attacking attempt. After 8...c5 9 exd6 (75a) Black has a choice:

a) 9...exd6 10 0-0!? (10 d5 is interesting too) 10...♞e8 11 f5!? (75b) 11...cxd4 12 ♟d5 ♟c7 13 fxg6 hxg6 14 ♟g5 ♟f6 15 ♟xf6+ ♟xf6 16 ♟xf6 ♟xf6 17 ♟xd4 ♟g5 18 ♟f3 ♟e6 19 ♟d5 gave White an attractive position in Rausis-McShane, Hastings 1997/8.

b2) 16...♟xc5 17 ♟xc5 ♟xc5 18 ♟b5 ♟f5 19 ♟xa7 ♟c8 has been recommended as fine for Black, with Gallagher citing 20 ♟xc8 ♞axc8 21 ♟b6 ♟e6 22 ♞xd8+ ♞xd8 23 ♟a3 ♞d2!. However, 20 ♟b5! (75c) looks good. Consider: the c8-knight has no good moves; the d7-bishop is pinned against an undefended rook; the black queen is a target; all the white pieces are well-placed.

1 d4 ♖f6 2 c4 g6 3 ♗c3 ♙g7 4 e4 d6 5 ♙e2 0-0 6 ♙g5 ♗a6 7 ♗d2 c6 (76a).

With 7...c6 Black deviates from the normal move 7...e5. The idea is to continue with ...♗c7-e6, hitting the g5-bishop and putting pressure on the d4-pawn. This idea is well-known after 7 f4, but is much more unusual after the more common 7 ♗d2. However, it looks viable. White can reply:

a) 8 h4 ♗c7 9 h5 ♗e6 10 ♙e3 c5 11 d5 ♗d4 ♠ 12 ♙d1 e6 13 ♙h6 e5 14 ♗h3 ♙g4 15 ♙xg7 ♗xg7 16 ♙xg4 ♗xg4 17 f3? ♗e3! → Gaprindashvili-Baczinski, Baden-Baden 1991.

b) 8 ♗f3 ♗c7 (76b) and then:

b1) 9 d5 cxd5 10 cxd5 b5, for example 11 ♙xf6 ♙xf6 12 ♗xb5 ♗xb5 13 ♙xb5 ♗b8.

b2) 9 0-0 is best met by 9...♙g4 planning ...♗e6, possibly ...♙xf3 and ...c5. Instead 9...♗e6 puts d4 under less pressure.

b3) 9 e5 dxe5 10 dxe5 ♗xd2+ (10...♗d7 is more ambitious) 11 ♗xd2 ♗d7 12 ♙xe7 ♗e8 13 ♙d6 (S.Ivanov-Malishauskas, Katowice 1993) 13...♗e6 followed by ...♗f4 and ...♗xe5 is absolutely fine for Black.

c) 8 f3 (the 'main line', and probably best) 8...♗c7 and now:

c1) 9 ♙d1 ♗e6 10 ♙e3 (10 ♗ge2? was played against me by a player who is normally very solid and sensible; it shows the effect of the opening surprise: White 'forgets' that his bishop is attacked!) 10...c5 (10...♗a5) 11 d5 (11 ♗ge2 ♗b6) 11...♗d4 (76c) seems OK for Black:

76a: after 7...c6

76b: after 8...♗c7

76c: after 11...♗d4

c11) **12 ♖xd4** cxd4 gives Black excellent compensation following **13 ♜xd4**, while **13 ♗b5 e5** **14 dxe6 fxe6** **15 ♗xd4?** ♗xe4 is a fiasco for White.

c12) **12 ♗ge2** e5 **13 dxe6 ♗xe6** **14 ♗xd4** cxd4 **15 ♗xd4 ♗xc4**.

c2) **9 d5** (76d) is a logical move, preventing ...♗e6. Then **9...e6?** **10 dxc6 bxc6** **11 c5** is no good at all, while **9...cxd5** **10 cxd5 e6** **11 dxe6 ♗xe6** **12 ♗e3** is unconvincing, so Black should play on the queenside, with **9...a6**, **9...♞b8**, **9...♗d7**, or maybe **9...c5**.

c3) **9 h4** gives Black a choice:

c31) **9...♗h5** **10 g4 ♗g3** **11 ♞h3 ♗xe2** **12 ♗gx2 h5** **13 ♞g3 hxg4** **14 fxg4** (Zucchelli-Burgess, Gausdal Eikrem mem 1997) **14...b5** is quite good for Black since it is difficult for White to organize his kingside play.

c32) **9...♗e6** **10 ♗e3** (**10 g4 ♗xg5** **11 hxg5 ♗d7** and the idea of shifting the e2-bishop and playing ♜h2 is too slow since Black has time for ...♗e8 and ...♗f8) **10...c5** **11 d5 ♗d4** **12 ♗xd4 cxd4** **13 ♜xd4 ♗h5** (76e) gives Black very good play for the pawn, e.g. **14 ♜f2? ♗e5**; **14 ♜d2 ♗g3** **15 ♞h2 ♜b6** (or **15...♗e5** **16 f4 ♗xc3**) **16 0-0-0 ♗e5** **17 f4 ♗xc3** **18 ♜xc3 ♗xe4**; **14 ♜e3 ♗g3** **15 ♞h2 f5** leads to a very difficult position for White. Black has various active ideas, while White's freeing attempt **16 f4** can be met by **16...♗xe4** or **16...♗xc3+** and **17...♗xe4**.

c4) **9 g4 ♗e6** **10 ♗e3 c5** **11 d5 ♗d4** (76f) **12 ♗b5 ♗xb5** (**12...♗xg4!?** leads to interesting tactics, but is totally unnecessary given how good Black's position is after normal play) **13 cxb5 a6** **14 bxa6 b6** **15 ♗b5 ♗xa6** **16 ♗xa6 ♞xa6** **17 ♗e2 ♜a8** **18 ♗c3 b5** **19 ♗xb5 ♞xa2** **20 ♞xa2 ♜xa2** ♠ Mor-tazavi-Burgess, London tt 1997.

Then after 13...♗g6 Kožul unleashed his pawn-sacrifice idea 14 c5 (77a) in place of 14 b4 ♗f6 15 c5 ♖f7, which has been regarded as too slow for White ever since the game Piket-Kasparov, Tilburg 1989. Since 14...dxc5 15 b4! is very good for White after either 15...cxb4 16 ♗b5 or 15...b6 16 ♗d3, Black replies 14...♗xc5 15 b4 ♗a6 (c7 caves in after 15...♗d7? 16 ♗b5). c) **17...♖b8** (the reason why 17 ♘xa7 was initially rejected by Kožul in 1991, but White turns out to have a good reply) 18 ♗b5! (77c) gives White a definite advantage after either 18...♖d8 19 ♗xd7 ♖xd7 20 ♖a4 ♖f7 21 ♘b5 or 18...♗xb5 19 ♘xb5 ♘xb4 20 ♖xc7 ♖a5 21 a4 ♖xb5 22 ♖xg7+ ♗xg7 23 axb5.

Here is an unusual idea for White: after 1 d4 ♟f6 2 ♟f3 g6 3 c4 ♟g7 4 ♟c3 d5 5 ♟g5 ♟e4 6 cxd5 ♟xg5 7 ♟xg5 e6, instead of the normal (and not especially promising) moves 8 ♟f3 or 8 ♟d2, to play 8 ♚a4+ (81a). A psychological factor comes into play: by playing 7...e6 Black has opted for a solid line. Black's soundest reply to the queen check is actually to play the ...c6 pawn-sacrifice idea – so at club level it is unlikely that Black will want to go in for this. The lines are as follows:

a) 8...♟f8? 9 ♚b4+ ♟g8? 10 dxe6 ♚xg5 11 e7! ♟d7 12 ♚xb7 is the sort of trap Black might fall into.

Queen's Indian: 7 e4 gambit

The sharp gambit in the Queen's Indian, **1 d4 ♘f6 2 c4 e6 3 ♘f3 b6 4 a3 ♙b7 5 ♘c3 d5 6 cxd5 ♘xd5 7 e4** (77a), was briefly popular in the mid-1980s following some interesting games by Ligterink and Polovodin. However, a much-publicized victory as Black by Beliavsky convinced the chess-world that the gambit was unsound, and it vanished almost completely. However, the 'refutation' is far from clearly OK for Black, and I think 7 e4 could be used to good effect once more.

After **7... ♘xc3 8 bxc3 ♙xe4** (Black must accept; otherwise White has gained a whole move over normal lines in which he plays e3 followed by e4, or misplaces his queen on c2 to force through e2-e4; however, one can expect plenty of odd deviations at move 7 and 8 at club level!) **9 ♘e5** (77b) Black has several possibilities:

a) **9... ♙d6 10 ♖g4 ♙g6 11 ♙b5+** forces **11... ♗f8**, when White has good long-term attacking prospects.

After 1 d4 ♗f6 2 c4 c5 3 d5 b5, 4 f3! (89a) is a rare but interesting move. White seeks to dominate the centre, but wishes to avoid the obscurities of the line 4 cxb5 a6 5 f3 e6 (or 5...axb5). The lines are as follows:

a) 4...e6 5 e4 exd5 (5...bxc4 6 ♗c3 exd5 7 ♗xd5 ♖b7 8 ♖xc4 ♗xd5 9 ♖xd5 gives White a firm grip, Van Vossen-Huyzer, Soest 1996) 6 cxd5 c4 7 ♗e2 ♖b7 8 ♖e3 ♗a6 9 ♗ec3 ♖a5 10 ♗d2 ♖c8 11 a4 +- Urban-Sziebert, Cappelle la Grande 1997.

b) 4...g6 5 e4 d6 6 cxb5 a6 transposes to one of Black more passive defences against 4 cxb5 a6 5 f3, viz. 5...g6 6 e4 d6. White has a few good options, e.g. 7 ♗c3 ♖g7 8 a4 0-0 9 ♖a3!? (89b) 9...axb5 (9...e6!? is more combative) 10 ♖xb5 ♖a6 (10...e6 11 ♗ge2 ♖b7 12 ♗f4! ±) 11 ♗ge2 ♖xb5 12 ♗xb5 ♗a6 13 0-0 ♗c7 14 ♗ec3 ♗d7 15 ♖h1 ♗b6 16 b3 with a pleasant plus, Anand-Adams, Roquebrune Amber rpd 1992.

c) 4...bxc4 5 e4 d6 is the critical line. It seems that White's king's knight should head for c3, while the other knight should develop via a3. 6 ♖xc4 g6 7 ♗e2 ♖g7 8 0-0 9 ♗ec3 (89c) 9...♖a6 (9...♗bd7 10 a4 ♗e5 11 ♖e2 c4 12 ♖e3 e6 13 ♗a3 {13 f4!}) 13...exd5 14 exd5 ♖e8 15 ♖d2 ♖a6 1/2-1/2 Urban-Shilov, Koszalin 1997, but 16 b4 looks good for White) 10 ♗a3 ♗fd7 11 ♖g5 h6 12 ♖h4 ♗b6 13 ♖xa6 ♗xa6 14 ♖e2 ♗b4 15 ♖ad1 ♖c8 16 f4 c4 17 e5 ♖d7 18 e6 fxe6 19 dxe6 ♖e8 20 ♖f2 ♖c6 21 ♗ab5 ♖b7 22 ♖d4 ♗d3 23 ♖g4 ♖h7 24 f5 with a strong attack, Krudde-Polgar, 1990.

Nescafé Frappé Attack

This odd (and oddly named) line of the Benko runs **1 d4 ♘f6 2 c4 c5 3 d5 b5 4 cxb5 a6 5 ♖c3 axb5 6 e4 b4 7 ♖b5 d6** (not **7... ♗xe4? 8 ♖e2**) **8 ♗c4** (90a). I did a lot of work on it in the 1980s, and my games with it helped give me a reputation as a violent attacking player. I even wrote a small book on it, but a decade on, it is still very dangerous and little-known. Database searches show that several people around the world have continued to develop the NFA; we shall look at some of their ideas now. The main moves, **8...g6** and **8...♗bd7**, are covered in the next two Surprises. Here are some rarer moves:

a) **8...♗xe4? 9 ♖e2** and then:

♙d3 Benoni – a try for Black

The system against the Modern Benoni based on ♘f3, h3, e4 and ♙d3 is extremely annoying for Black. Here is an attempt to revive Black's fortunes. It's risky, but it might just work. Failing that, it might work once or twice!

After 1 d4 ♘f6 2 c4 c5 3 d5 e6 4 ♘c3 exd5 5 cxd5 d6 6 e4 g6 7 h3 ♙g7 8 ♘f3 0-0 9 ♙d3, I propose that Black try 9...b5 and then after 10 ♘xb5 play the 'refuted' move 10...♘xe4 (the main line, 10...♙e8 is under considerable pressure). Assuming White knows his stuff, you will get the following moves: 11 ♙xe4 ♙e8 12 ♘g5 h6 13 ♘e6 ♙a5+ 14 ♘c3 ♙xc3+ 15 bxc3 ♙xc3+ 16 ♙d2 ♙c4 (93a).

a) The official refutation continues 17 ♙f3 ♙xe6 18 ♙c1 ♙d4 19 0-0 ♙xh3 20 ♙c3 and now Black is supposed to lose after 20...♙xe4 21 ♙ce1. However, 20...♙xg2!! (93b) seems OK for Black: 21 ♙xg2? ♙xe4; 21 ♙xg2? ♙xe4; 21 ♙xd4? ♙xf3; 21 ♙f4 ♙xe4 22 ♙ce1 (22 ♙f6? ♙e5 23 ♙fe1 ♙g4 gives Black a decisive counterattack; 22 ♙xh6? ♙e5 23 ♙fe1 ♙g4 is similar) 22...♘d7 23 ♙xh6 f6 looks unclear, e.g. 24 ♙xe4 ♙xe4 25 ♙f4 (25 ♙e1?! ♙f5) 25...♙xd5 26 ♙d1 (26 ♙xd6 ♙e6 27 ♙e1 ♙f5) 26...♙e6.

b) 17 ♙f3 fxe6 18 ♙e3 ♙b7 19 ♙c1 ♙b4+ 20 ♖f1 (93c) (my recommendation in *Beating the Indian Defences*) offers White compensation, but is not too clear. Yes, I'd rather be White, but all is not lost for Black, after, say, 20...♘d7!?

In case you weren't sure, the Fajarowicz is an off-shoot of the Budapest Defence, with Black, after **1 d4** ♖f6 **2 c4 e5 3 dxe5**, playing the uncompromising **3...♗e4**. This stands up well against most replies thanks to Black's piece-play with ...♗b4(+) and in some cases a ...d5 pawn sacrifice. However, Black has never found a convincing answer to **4 a3**, preventing the bishop check, and preparing to return the pawn in such lines as 4...♘c6 5 ♗f3 d6 6 ♖c2! ♗c5 7 b4 ♗e6 8 ♗b2 dxe5 9 e3! for heavy positional pressure. **4...b6!?** (94a) might solve Black's problems:

Dutch: Bogoljubow Gambit

This is an old and completely forgotten gambit idea that was tried successfully by Bogoljubow in the early part of his career.

It goes: **1 d4 f5 2 ♖c3 ♗f6** (after 2...d5 3 e4!?, Black must of course avoid 3...fxe4? 4 ♜h5+, while after 3...dxe4 White has the choice between 4 ♙g5 and 4 ♙c4 followed by ♗h3 or f3) and now **3 g4** (97a). Unlike some other berserk gambits with g4 against the Dutch (e.g. 2 g4?! fxg4 3 h3, when 3...g3! is a very good reply), the idea here isn't so much to break open the h-file but rather to dominate the centre. Then:

a) **3...fxg4** can be met by 4 e4 d6 5 h3.

b) **3...♗xg4 4 e4 e5** (this attempt to refute White's play is unconvincing) **5 exf5!** ♜h4 6 ♜e2 ♗c6 7 ♗f3 ♜h5 8 ♗d5 ♙d6 9 ♗xe5! (97b) and then:

b1) **9...♗xd4 10 ♗xg4+** (not 10 ♜xg4? ♜xg4 11 ♗xg4 ♗xc2+) **10...♗xe2 11 ♗gf6+ gxf6 12 ♗xf6+** is Bogoljubow's analysis – White is doing well.

b2) **9...♙xe5 10 dxe5 ♜xf5** (10...♗d4 11 ♜e4 ♗xf5 12 ♙e2 is also disastrous) **11 ♙h3!** (97c) **11...h5 12 f3 ♜f7 13 ♗xc7+ ♖d8 14 ♗xa8 ♗d4 15 fxg4 1-0** Bogoljubow-Weindl, Stockholm 1920. There would follow **15...♗xe2 16 ♙g5+ ♖e8 17 ♗c7+ ♖f8 18 ♜f1**.

So, on move 4, Black should try something like 4...d6, but White will have a good deal of play for the pawn after 5 ♙h3.

Trompowsky: 2...e6 3 e4 c5

Here we consider an unusual reply to the popular Trompowsky, 1 d4 ♟f6 2 ♙g5. When Black plays 2...e6, the idea is usually to meet 3 e4 (instead 3 ♟f3 is a Torre, but in general, if White wanted a Torre, he would have played 2 ♟f3) with 3...h6, losing time to gain the bishop-pair. Instead 3...c5! (98a) is a very interesting idea that is not mentioned in *ECO*. Then:

a) 4 ♟f3 leaves White over-extended. 4...cxd4 is a good reply, while 4...♖b6 looks tempting.

b) 4 d5 ♖b6 (98b) is more annoying for White than the similar line 2...c5 3 ♙xf6 gxf6 4 d5 ♖b6 5 ♖c1 ♙h6 6 e3, since after 5 ♙xf6 gxf6 6 ♖c1 ♙h6 White has no adequate reply.

Trompowsky: 2...d5, 3...gxf6

It is possible for Black to drum up some interesting possibilities against the Trompowsky, **1 d4 d6 2 e5**, by playing the solid **2...d5**, provided he answers **3 e4xf6** (3 e4f3 e4 is a very comfortable version of the Torre for Black) with **3...gxf6!**? (99a). This seems to me the natural way to recapture, though it is quite rare. Black intends to get counterplay with a quick ...c5 as we see in the following variations:

a) **4 e3c3 e6 5 e3 c5 6 e2ge2 d6c6 7 g3 cxd4 8 exd4 h5 9 e2g2 h4** with counterplay, Aleksandrov-Tunik, Voskresensk 1993.

b) **4 c4 c5 5 d3c3 cxd4 6 e4xd4 dxc4 7 e4xd8+ e4xd8 8 e4 e6 9 e4xc4 e4b4 10 d3ge2 e4d7** is very solid for Black, Meduna-Balashov, Trnava 1988.

c) **4 e3 c5 5 c4 cxd4** and then:

c1) **6 e4xd4** and here, rather than 6...dxc4 7 e4xd8+ e4xd8 8 e4xc4 ±, 6...e6 looks quite OK, while 6...d3c6 (riskier) 7 e4xd5 e4xd5 8 cxd5 d3b4 9 d3a3 d3xd5 might hang together too.

c2) **6 exd4 d3c6** and here:

c21) **7 c5?! e3g8 8 d3c3 e5!?** (99b) **9 e4b5 e3xg2 10 e4f3 e3g6 11 e4xd5 exd4 12 e4xc6+ bxc6 13 e4xc6+ e4d7** and Black won quickly, T.Wall-Sadler, British Ch (Nottingham) 1996.

c22) **7 cxd5 e4xd5 8 d3f3 e4g4** (8...e5!?) **9 d3c3 e4b4 10 e4d2 e4xc3 11 bxc3 exd4 12 cxd4 e3g8** is OK for Black, San Segundo-Andersson, Pamplona 1997/8) **9 e4e2** (99c) and now I see no reason why Black can't get away with **9...e4xf3 10 e4xf3 e4e6+**, e.g. **11 e4f1 e4c4+ 12 e4g1 d3xd4**.

Schmid Benoni 5...0-0 6 e5!

The position after 1 d4 ♘f6 2 ♘f3 c5 3 d5 g6 4 ♘c3 ♙g7 5 e4 can arise from various move-orders (1 e4 c5 2 ♘f3 g6 3 d4 ♙g7 4 d5 ♘f6 5 ♘c3 being another) and here the move Black would like to play is 5...0-0. The point is that Black would like to do without the move ...d6, not just to cut out ♙b5+, but also to make some tricks like 6 ♙e2?! b5! 7 ♙xb5 ♘xe4 work. However, White has the powerful reply 6 e5! (100a).

Then 6...♘e8?! 7 h4! d6 8 e6! fxe6 9 h5 gave White a powerful attack in Yermolinsky-Khmelnitsky, USA Ch (Modesto) 1995. Yermolinsky's main idea is that the natural 6...♘g4 is answered by the stunning novelty 7 ♘g5! (7 ♙f4?! is feeble by comparison):

a) 7...♘xe5 8 f4 f6 (8...h6 9 ♘h3 traps the knight) 9 ♘xh7! (100b) 9...♙xh7 10 fxe5 fxe5 11 ♙d3 with an enormous attack.

b) 7...d6 8 e6 ♘xf2 will give Black a few pawns for the piece, but is unconvincing.

c) 7...h5 is Baburin's suggestion, and probably Black's only hope.

d) 7...♘h6 8 h4 f6 (8...♙xe5 9 h5 ♘f5 10 ♘xh7!! gives White a winning attack) 9 ♘ge4! ♘f7 (9...fxe5 10 h5) 10 h5! f5 11 ♘g5 (100c) 11...♘g5 (11...♙xe5 12 ♘xh7!) 12 ♙xg5 ♙xe5 (12...h6 13 hxg6! hxg5 14 ♙h8+!!) 13 hxg6 hxg6 14 d6! ♙f6 15 ♙xf6 ♙xf6 16 ♙c4+ e6 17 ♙d2 ♙f8 (17...♙f7 puts up more resistance) 18 ♘d5! exd5 19 ♙xd5+ ♙e6+ 20 ♙xe6+ dxex6 21 ♙g5 ♙d7 22 0-0-0 ♙e8 23 ♙d8! 1-0 Khuzman-Min-Asian, Pula Echt 1997.

Soundness: ? Surprise Value: ?

And finally...

Here are three ideas that didn't quite justify a full page in the book...

101a: after 2...h6

101b: after 3...d7ge7

101c: after 10...e2f5

Sicilian: Bucker's 2...h6

By playing **1 e4 c5 2 d3 h6** (101a), Black intends 3 d4 cxd4 4 dxd4 d6 5 d3 e5, when after 6 ddb5 d6, he gets a Pelikan-type position where White cannot play e5. However, cute though that idea is, if White plays some other third move (e.g. 3 c3) it is hard to see Black justifying ...h6.

Zilbermints Gambit

This arises after **1 d4 e5 2 dxe5 d6 3 d3 dge7** (101b), and is possibly the best attempt to make 1...e5 viable. That, however, may not be saying very much. I find Black's position hard to believe after either 4 e5 h6 5 e4 g5 6 e3 or 4 d3 d6 5 e5 e7 6 e7 dxe7 dxe7, but maybe I should have more faith...

The Original Philidor

Although the Russian player Maliutin has revived this ancient line, **1 e4 e5 2 d3 d6 3 d4 f5**, with success and, for instance actually won a game from the position after 4 d3 fxe4 5 dxe4 d5 6 d5 eg5 h6 7 d7 dxf7 8 dxe5+ e7 9 d6 g6+ f6 10 f3+ e5 11 d8 e7+ 12 e2 e4 13 g4 xf3 14 xf3 xc2 15 h4 d6 16 g5+ f5, I think we can leave this as his exclusive domain!

GAMBIT

Most chess players are fed a set of dogmatic rules about how the opening must be played. The result: stereotyped, unimaginative play. The opening surprises in this book land like bombshells in the apparent calm of standard openings and disorientate your opponents as they grapple with original problems.

This book is a treasure-trove of unusual ideas at an early stage of the opening, each with a firm logical foundation, yet running against the grain of conventional play. Each idea has quick-strike potential and is supported by enough concrete analysis to enable you to try it with confidence.

- All major openings covered
- Surprises for both White and Black
- Deeply researched and up-to-date
- Each idea is assessed in terms of its soundness and its ability to surprise and shock

A thought-provoking introduction examines the underlying concepts of opening play and considers how the standard principles need to be modified in the light of the highly combative handling of the opening now favoured by the world's top players.

FIDE Master **Graham Burgess** holds the world record for marathon blitz chess playing. He is a highly versatile chess writer, whose *Mammoth Book of Chess* won the British Chess Federation Book of the Year Award in 1997.
